

RANVEER DESHMUKH

SOFTWARE ENGINEER

Melbourne, Australia | 0423445523 | ranveerdesh575@gmail.com | [LinkedIn](#) | [Github](#) | ranveerdeshmukh.com
Work Rights: Temporary Graduate Visa (subclass 485)

PROFESSIONAL SUMMARY

Full-stack software developer with hands-on experience building and deploying web-based applications across frontend and backend systems. Recently graduated with a degree in Computer Science, with experience working with databases, APIs, and modern development workflows in collaborative team environments. Comfortable using cloud platforms and automation tools to deliver reliable software, and motivated by solving real-world problems through clean code, continuous learning, and thoughtful engineering.

EDUCATION

RMIT UniversityFeb 2023 — Dec 2025

Bachelor of Computer Science, Melbourne, Australia
Majored in Cyber Security

KEY SKILLS

Programming Languages: JavaScript, TypeScript, Python, Java, C++
Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS, Responsive Design
Backend: Node.js, Express.js, RESTful APIs, Authentication & Authorization
Databases: SQL, PostgreSQL, MongoDB
Cloud & Deployment: AWS (EC2, S3), Docker, CI/CD (GitHub Actions)
Tools & Practices: Git, GitHub, Agile, Component-Based Architecture, Debugging
Employability: Problem Solving, Team Collaboration, Clear Communication, Adaptability, Ownership

PROFESSIONAL EXPERIENCE

Software Engineer Intern, Bridge MarketplaceDec 2024 — Mar 2025

New York, USA (Remote)

Bridge Marketplace is a fintech company which connects businesses with suitable lending partners.

- Built a **purchase order scorecard dashboard** using **Python, Flask, and Dash**, analysing large Excel and CSV datasets to surface key financial metrics.
- Developed **Python-based data pipelines (Pandas, SQL)** to clean, validate, and aggregate transactional data, improving data quality and consistency for downstream systems.
- Implemented **AI-powered OCR workflows** to extract structured data from variably formatted financial statements, reducing manual processing and data errors.
- Integrated **LLM-based processing (ChatGPT API)** to assist with interpreting extracted financial data and structuring it for downstream lender-matching workflows.

Worked in a **remote Agile environment**, owning feature delivery and presenting sprint demos, strengthening collaboration, communication, and time management skills.

Freelance Full-Stack Developer, Self Employed

Mar 2025 — Present

Remote

- Delivered end-to-end web applications from requirements gathering through deployment, strengthening **full-stack development and solution design skills**.
- Developed responsive user interfaces, backend APIs, and database-driven features, building solid experience in **frontend-backend integration and data modelling**.
- Managed deployment workflows and basic CI/CD pipelines to support production-ready releases, gaining hands-on **deployment, automation, and reliability practices**.
- Worked directly with clients to refine features and iterate on solutions, enhancing **client communication, requirement analysis, and time management skills**.

Software Developer Intern, RISC at RMIT University

Apr 2024 — Dec 2024

Melbourne, Australia

RISC is a student-led technical club at RMIT University focused on cybersecurity and hands-on projects.

- Contributed to **full-stack features** for **internal research** and innovation platforms.
- Collaborated with stakeholders to translate requirements into working software components.
- Assisted with **system integration** and feature enhancements across research tools.
- Followed structured development practices including **Git-based version control**.

Crew Member, Domino's Flemington

Jul 2023 — Mar 2024

Melbourne, Australia

- Worked in a high-volume, fast-paced environment, collaborating with team members and communicating with customers to meet service standards reliably and under time pressure.

PROJECTS

[SHOME360](#)

Collaborative team project delivering a scalable Mixed Reality (MR) training platform using Unity WebXR and a modular Node.js/Express backend with MongoDB, RESTful CRUD APIs, and file-upload pipelines.

Worked in an Agile team environment, coordinating frontend-backend integration through clear communication, code reviews, and shared ownership to deliver interactive lab simulations and scalable user workflows.

Tech stack: React, Vite, MongoDB, RESTful API, PM2

[Climate Data Analyzer](#)

A dynamic website enabling users to analyse effortlessly and filter through over 260 years of climate and population data of each region of Australia, making it an excellent tool for researchers to improve their efficiency.

Tech stack: Java, HTML & CSS, MySQL, SQLite

[Purchase Order Scorecard Dashboard](#)

Independently designed & delivered an end-to-end analytics solution for an organisation under strict timelines, processing and analysing large volumes of purchase orders and invoices from Excel and CSV files. Built Python-based data pipelines using Pandas for data cleaning, validation, and aggregation, and integrated OCR-driven extraction workflows to standardise variably formatted financial documents for downstream AI-based analysis.

Tech stack: Python, Dash, Pandas, ChatGPT, OCR Tools, Excel/CSV Processing
